Features

- Drivers can check in before arriving at the site.
- Consistent flow of trucks through facility.
- Fewer employees required for interaction with drivers and scale operation.
- Drivers stay in their trucks.

To learn how our systems can help give you control at your facility, please contact your Kahler Territory Sales Manager. Don't know who that is? Visit [KahlerAutomation.com/sales](https://www.KahlerAutomation.com/sales) to find out!

Product overview

Applicable Solutions

Easy mobile check-in and smooth traffic flow

- Driver-friendly mobile app makes getting a load easy as ready, set, load.
- Offsite check-in allows drivers time to confirm load details in advance.
- Rapid scan process provides quick check-in followed by simple loadout.

READY

A quick and easy pre-arrival check-in offsite allows the driver to input their order number and destination, and select the compartment configuration, before arriving at the facility.

This reduces the time each truck spends in line, for decreased traffic congestion and increased throughput at the facility.

SET

Once at the facility, driver check-in is a breeze with the easy scan system to capture the needed weight information. After that, detailed bay directions let the driver know where to proceed.

This process lets employees focus on other tasks, while keeping drivers in their trucks for improved safety and reduced personal interaction.

LOAD

After loadout is complete, drivers confirm the gross weight and sign for the bill of lading, with the option to receive a printed ticket in addition to the electronic copy.

This allows for simple and complete documentation while increasing loadable tonnage and optimizing employees' time for other tasks.
